KENSIUM
OrderPad

Product Overview

The Kensium OrderPad is a portable, handheld, and tablet-compatible PWA(Progressive Web App) that enables staff, salespersons, or associates to swiftly capture customer orders, eliminating the reliance on traditional pen-and-paper order-taking methods. This solution plays a crucial role in meeting the requirements of high-touch low volume business requirements, where only limited automation is feasible due to the need for personalized attention and support for each customer.

It’s an integration of 3 applications – Acumatica, OrderPad Connector and OrderPad.

Acumatica ERP will be responsible for keeping records of customers and products and managing transactions.

Using the OrderPad Acumatica Connector, we transmit product details, orders, and related information from Acumatica to OrderPad. Therefore, in OrderPad, staff members, who will be recognized as users, will log in using a PIN to process orders.

In the OrderPad front end, the products will be displayed and allow users to place orders on behalf of the customers.
