Category attribute mapping screen

On the top right-hand corner of the screen, you will have the following options.

- Update Schema
- Recommended Settings
- Map Category attributes

Update Schema:

In Acumatica you have the option for [Category Schema] under the [Schema Management]. The fields which we have selected in the Category Schema within Acumatica will be updated in Magento with the option of [Update Schema]. See the following figures:

Acumatica	Search Q		Revision Two Products 1 Products Wholesale 2	0/21/2023 🗸 🕜 💄 admin admin 🥆

Update Schema on Magento

The **[Update Schema]** will retrieve and store the data in the database fetching the data from Acumatica to Magento. Upon clicking on the option, you will be able to view the confirmation message [Are you sure that you want to update the schema] with a **[OK and Cancel]** option.

Recommended Mapping:

Recommended Mapping will pull the data for the default mapping. There is a certain system-defined mapping which can be retrieved by using recommended mapping. In the first place, the screen should display as follows.

The system-defined recommended mapping appears on the screen

Map Category Attributes:

If you want to map the category attributes manually use this option. You need to map the category attributes as per Acumatica to sync the data through the connector. Upon clicking on the [Map Category Attributes] you will be able to view a pop-up where you need to specify the Magento Category attributes and Acumatica Category Attributes to map it seamlessly.
