Customer Group

The customer group also needs to be mapped. In Acumatica you will have [Customer Class] to categorize the customer like Local, International. However, in Magento, the Customer is classified in the customer group. In Magento, the Customer group would be General, Retail and Wholesale.

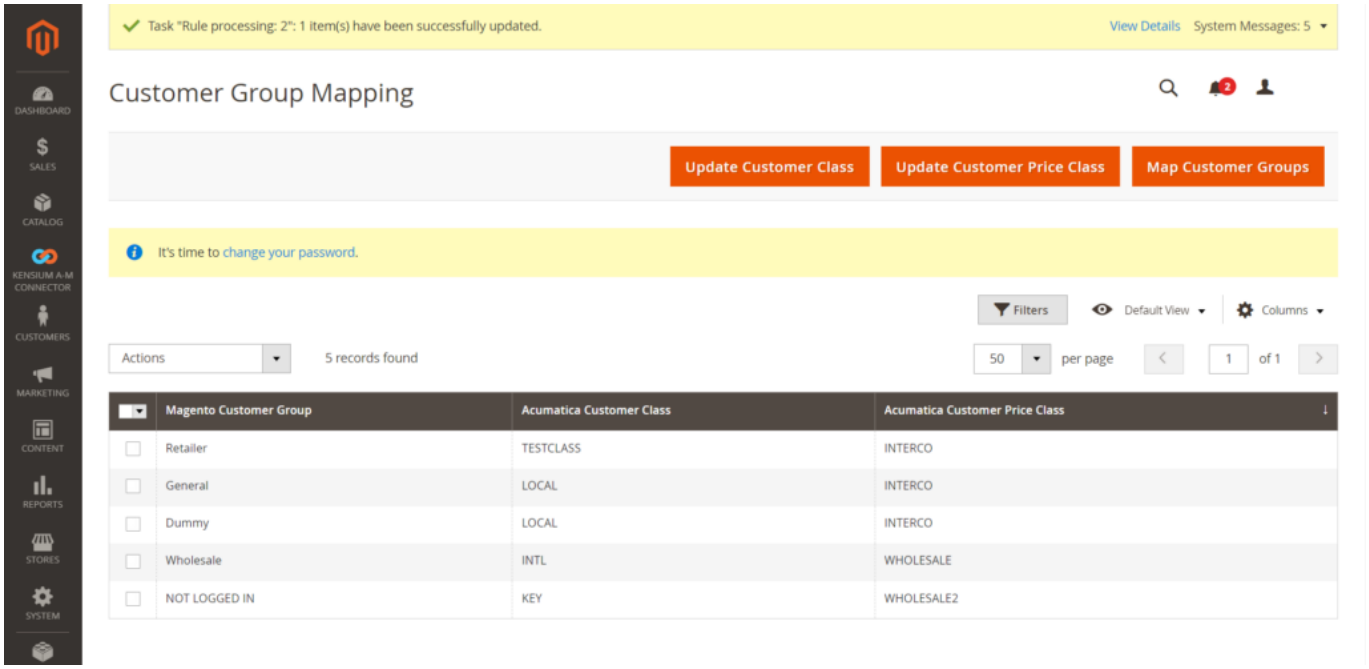

To access the Customer Group, click on the left panel [Kensium A-M Connector] and go to the Mapping section.

Customer Group Mapping

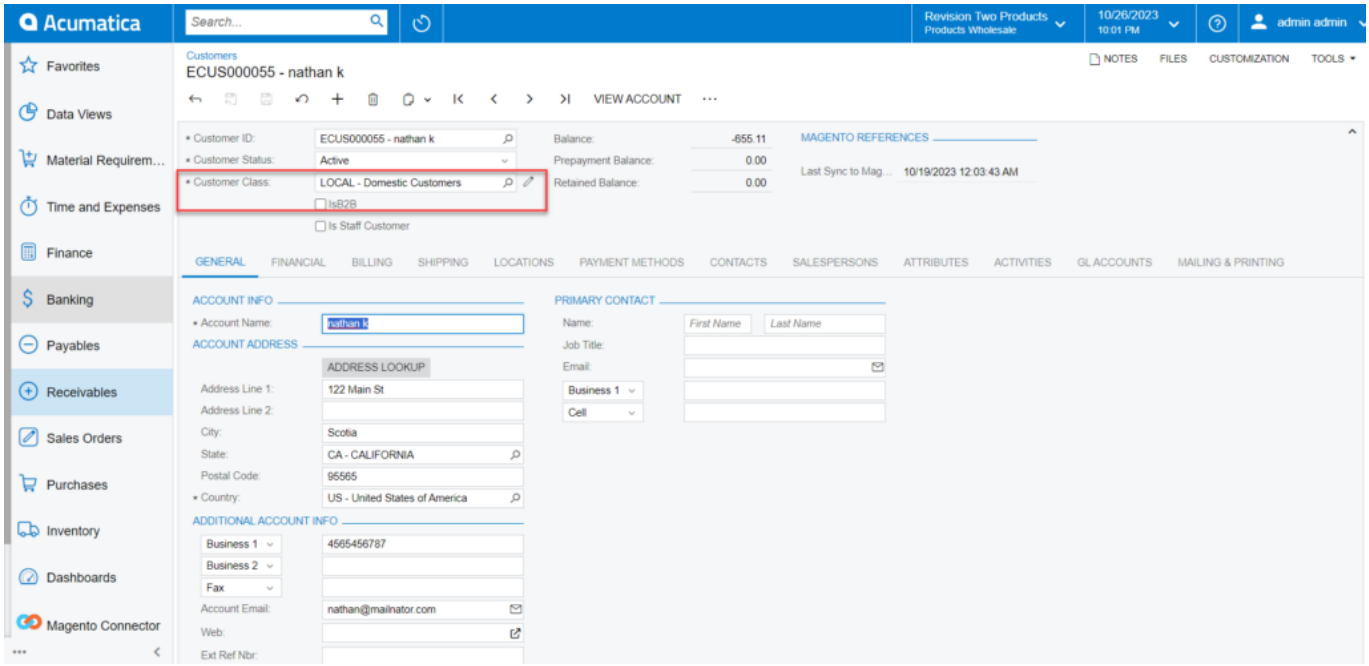

The group is a combination of Customer Class and Customer Price Class. Though it's not mandatory while mapping. On Magento, you will have the following options as

- Update Customer Class
- Update Customer Price Class
- Map Customer Group.

Option available in Customer Group mapping

In Acumatica the Customer class is Local

Price Class under Shipping in Acumatica

In the above combination, the customer will be allocated as not logged in Group. Because the Customer Class is Local, and the Customer Price Class is Wholesale.

Note that in Acumatica the Customer Class is mandatory, however, the Customer Price Class is not. So, while mapping in Magento you need to Map the customer Class which is a mandatory one.

- **Update Customer Class:** Upon clicking on the button, a pop-up will appear on the Magento screen. To update the Customer Class, click on [OK].

Mapping the Customer Group

To add multiple customer groups, click on the **[ADD]** button. It will create another series of dropdowns in the pop-up.

The ADD button will create multiple lines to map the customer group

Delete: Magneto allows you to Delete the group. In case you want to delete the group, you need to simply select the desired group and click on [Delete] under [Action]. The mapping of the customer group will be deleted not the actual group. For Category and Customer, Magento provides the Delete option.
