

Import Setup in Kensium A-M Connector

The Magento connector allows you to export the configuration set-up for ease of use. You can import functionality for Mapping and Functionality. Click on the Import Setup as shown in the figure below.

Import Setup option in Configuration

Once you click on the [Import Setup] you will be redirected to the **[Import - Mapping & Configuration]** window.

You will have the option to choose the Entity Type from the drop-down menu. To import select the file that you want to import. Make sure you are selecting the correct file to successfully process the import as shown below.

Application alerts

The application supports only the .csv file format. So, we strongly recommend you double-check the file format before importing.

The screenshot shows the 'Import - Mappings and Configurations' page. At the top, a yellow banner displays a success message: 'Task "Rule processing: 2.3": 1 item(s) have been successfully updated.' Below this, a search bar and user profile 'ashaa' are visible. The main content area features a red-bordered box containing a green checkmark and the message: 'Basic Configuration is successfully imported. Please clear cache for Configuration and Database DDL operations in order to reflect the changes.' Below the message, there are input fields for 'Entity Type' (set to 'Please Select Entity') and 'Select File to Import' (with a 'Choose File' button and 'No file chosen' text). A footer bar contains copyright information and links to 'Privacy Policy', 'Account Activity', and 'Report an Issue'.

Confirmation message upon the successful import.

The application gives an information message upon the successful import along with the Entity Type.

	<p><i>If the file type doesn't match in those cases the import will fail and you will be notified about this along with a hint about what caused the error.</i></p>

Sync Rules:

The application allows you to set sync rules. The rule applies to the process of synchronization of orders. Under the Kensium A-M Connector, the Sync Rules option is available under the Configuration menu as shown in the figure below.

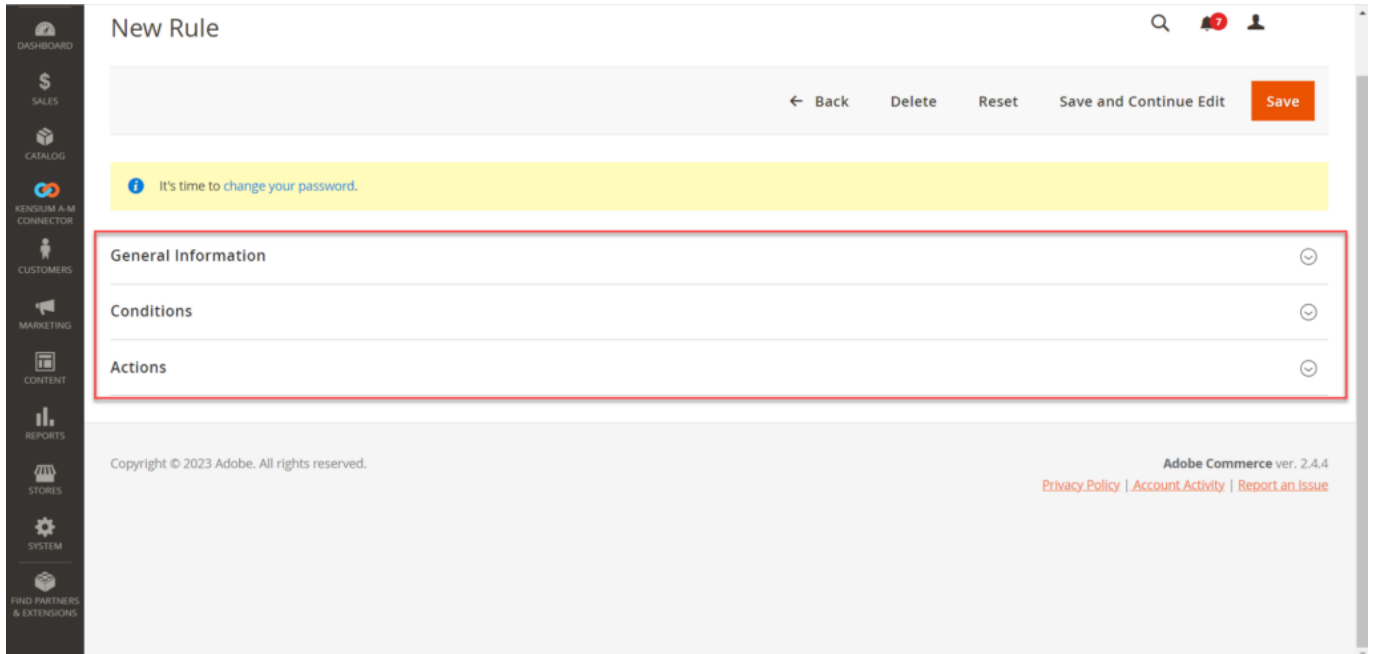

Sync Rules option in Configuration in Kensium A-M Connector

You can add sync rules from this section by clicking on **[Add New Rule]**.

The Add New Rule section is divided into the following:

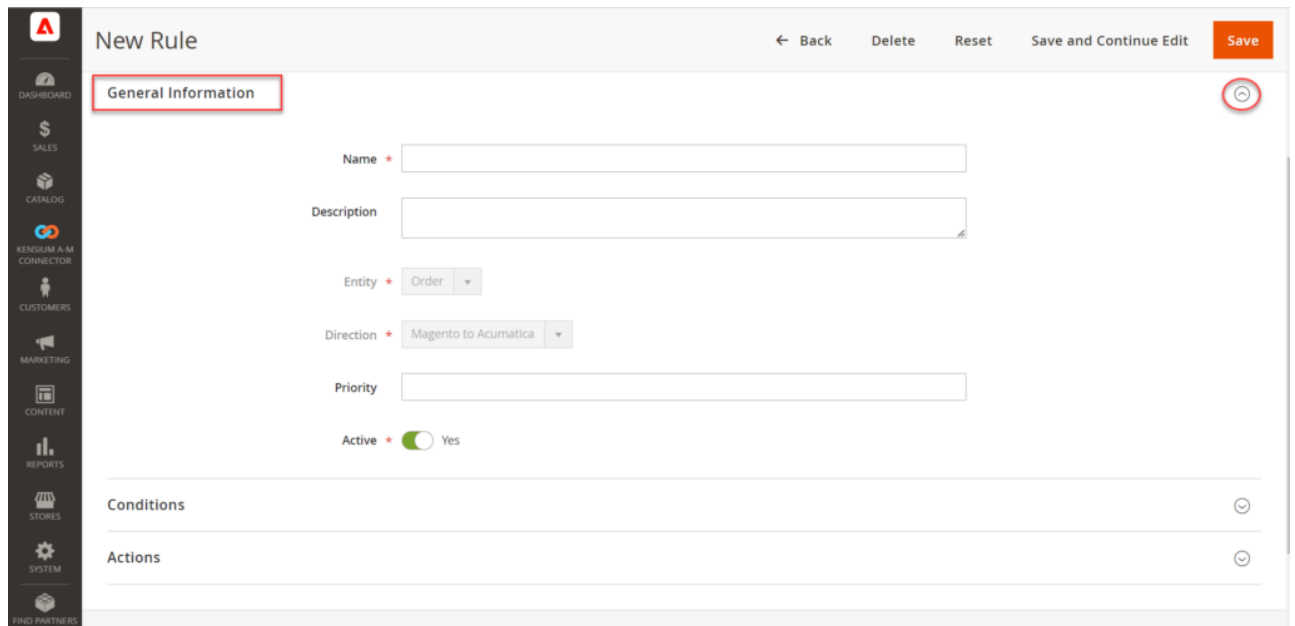

1. General Information
2. Conditions
3. Actions

Add a sync rule.

1. **General Information:** In the General Information section, you need to enter the following field-level information.
 - a. Name: This is a mandatory field. You need to set the rule name.
 - b. Description: You can write a general description for setting the rule. For example, if there is a negligible difference in the price of the product you can write in the description section.
This is an option field.
 - c. Entity: This should be by default Order. Since the sync rule applies to the order only.
 - d. Directions: This field is mandatory, however, doesn't require manual entry or selection. The data sync direction is set from Magento to Acumatica by the application.
 - e. priority: You need to set the priority of the Order syncing from Magento to Acumatica.
 - f. Active: This should always be enabled. Toggle the button to enable. This is mandatory to set the sync rule.

Condition section after expanding

KENSIUM

Adobe Connector

If you leave the condition blank the rule will not be applied by the application.

- You can add the condition by clicking on the sign if all these conditions are true. The application will provide you with the following options to choose from the drop-down.

Conditions

Apply the rule only if the following conditions are met (leaving blank will not apply the rule).

If ALL of these conditions are TRUE :

Please choose a condition to add. ▼

Please choose a condition to add.

Conditions combination

Connector Attributes

Sync Exception

The above options are available to choose from in the drop-down.

- *Condition combination:*
- *Connector Attributes:* Connector Attributes refer to the specific characteristics or properties that are utilized to establish a connection between Magento and Acumatica.
 - *Sync Exception:* You will get this option under Connector Attributes. After selecting the Sync Exception, the application will allow you to write the condition in the text box as shown below:

Conditions

Apply the rule only if the following conditions are met (leaving blank will not apply the rule).

If ALL of these conditions are TRUE :

Sync Exception is | ✖

+

Sync Exception in Connector Attributes

3. **Actions:** You can take any of the following actions based on the condition. You have to choose the action based on certain conditions.

- ☒ • **Retry Order Sync:** In case you want to retry the order sync.
- **Retry Order Sync with Non-Stock Items:** In case you want to retry the Order Sync with the Non-Stock items, you need to select this option. The application will ask to enter the non-stock item ID in this scenario.

Actions

Non Stock Id *

- **Stop Automated Order Re-Sync:** This will stop the automated order re-sync.
- **Stop Automated Order Re-Sync And Send Mail:** This action will stop the automated order re-sync and you will have an option to send an email to the contact. The following sub-field will appear on the screen, and you need to enter the information for all the mandatory drop-down and text fields.
 - **Email sender:** Choose the email sender from the drop-down.
 - **Email Template:** By default, the application provides you with an Order Sync Exception Email.
 - **Email Recipient:** Enter the valid email address of the email recipient.

Actions 

Apply * ▼

Email Sender * ▼

Email Template * ▼

Email Recipient *

- **Change Order Status:** You can change the order status from the drop-down menu. The following option is available in the drop-down.

KENSIUM

Adobe Connector

- **Order Status:** Cancelled, Closed, Completed, On Hold, Payment Review, PayPal cancelled reversal, PayPal Reversed, Pending Payment, Pending, Pending PayPal, Processing, Rejected.

After completing all the steps to sync rule setup you will be landed on the following **[Sync Rule]** screen.

Sync rules will be applied for the Magento to Acumatica failed orders only.
