

# Initialization under Configuration

To initialize for the first time, you need to click on the **[Magento Connector]** on the left side panel and click on **[Initialize]** under **[Configuration]** as shown in the following screen.

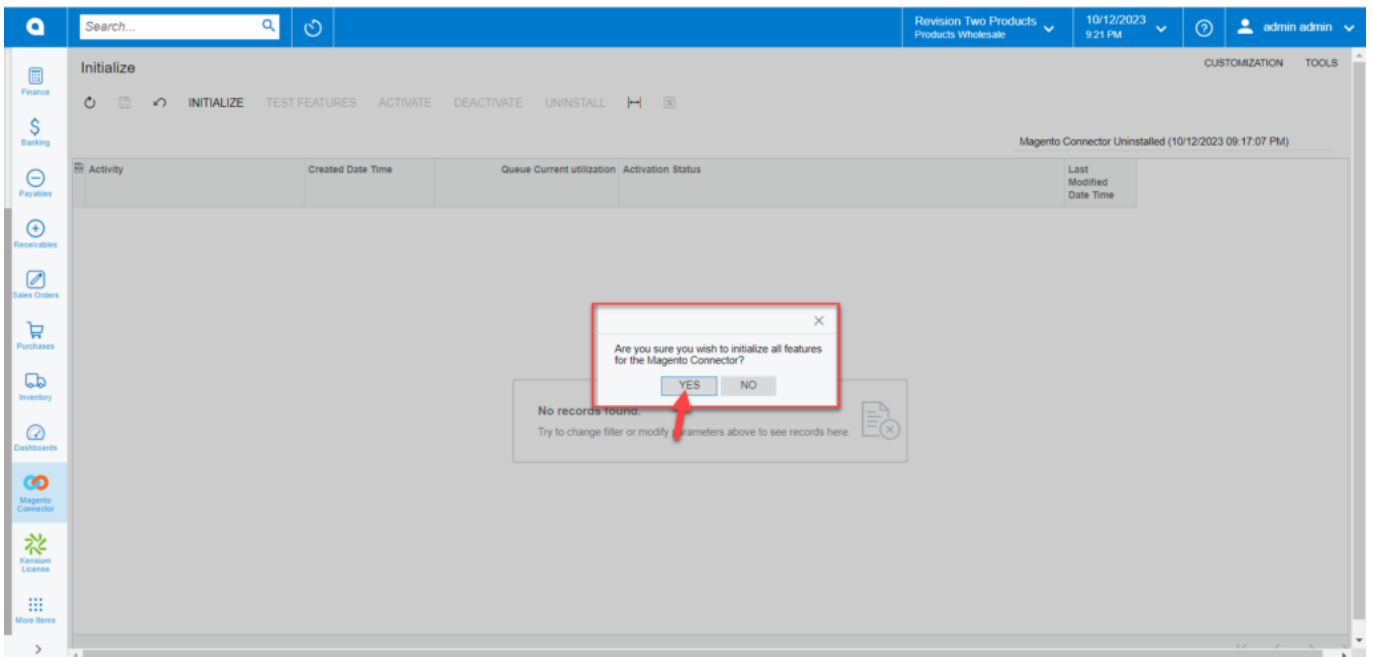

Initialize screen

In the first place, you will only see the [Initialize] button activated. Rest all the buttons should be deactivated, and the screen will appear blank. See the following screenshot.

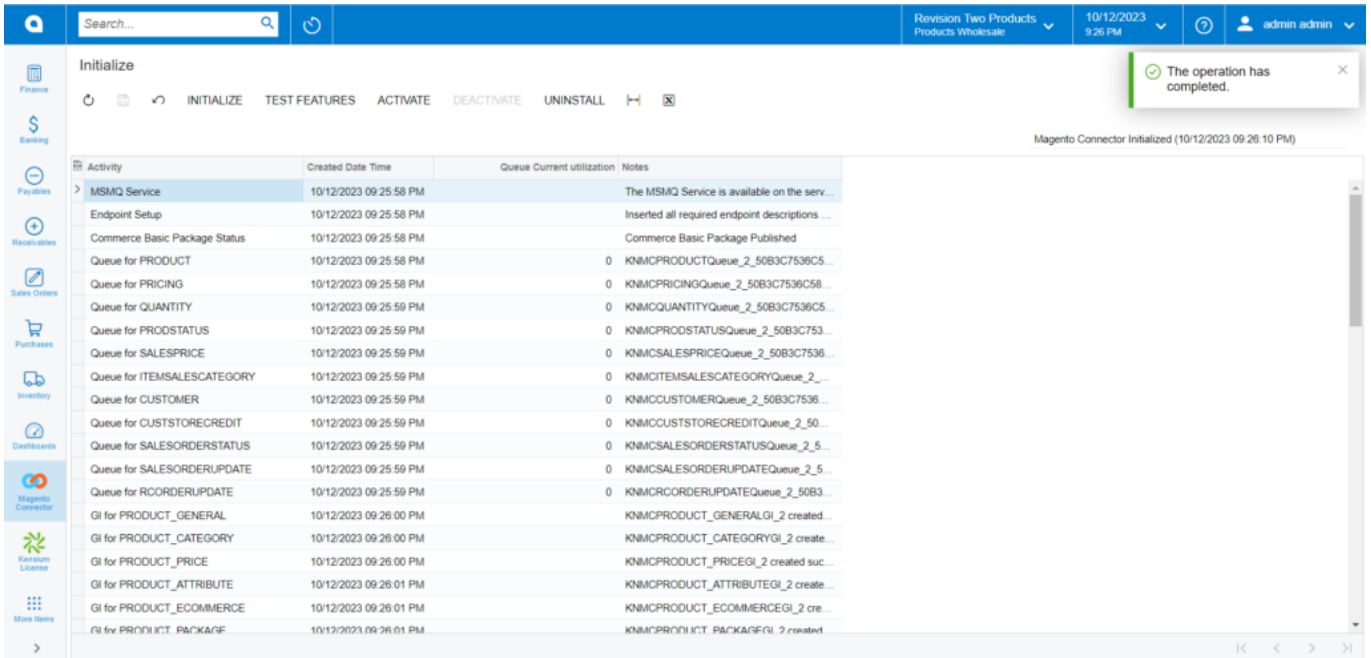

Initializbutton is active and the screen will be blank

To initialize all features in Magento Connector click [Yes]

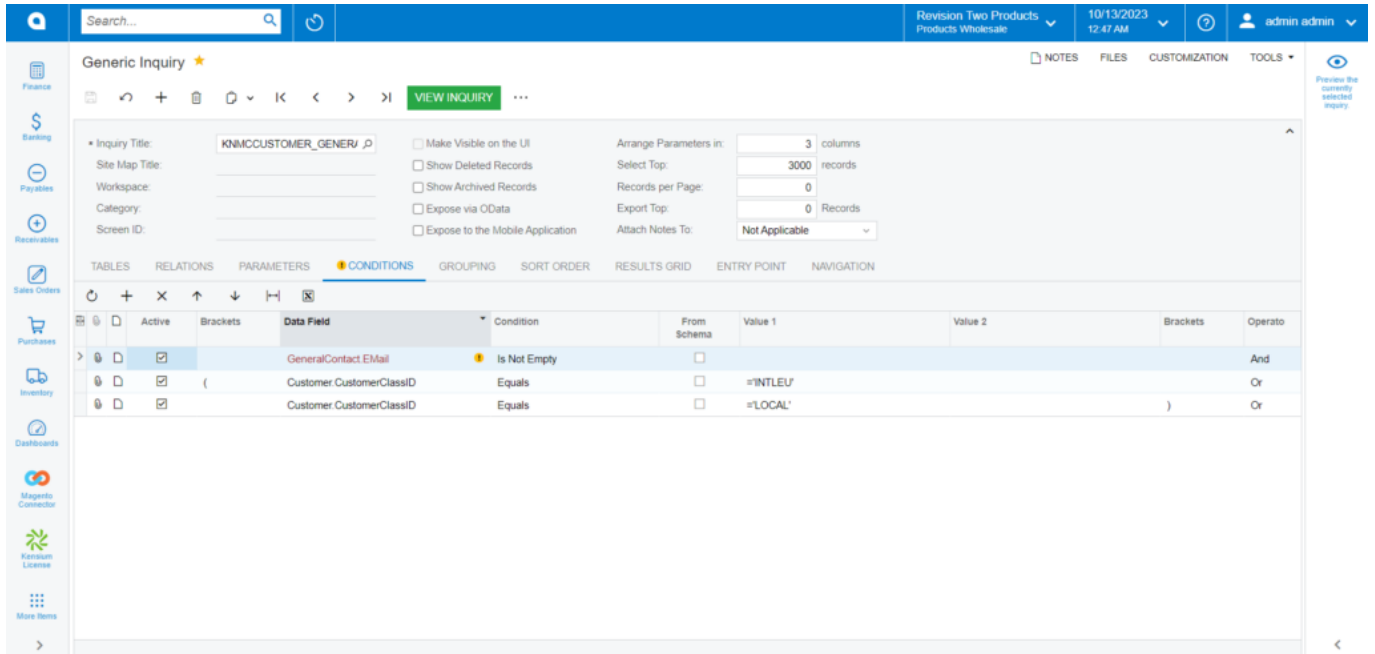

Click on the [Initialize] button. Upon clicking on Initialize a smart pop-up appears on the screen as [ **Are you sure you wish to initialize all features for Magento Connector**] with a [Yes] and [ No] option. Click on the [ **Yes**] option.

### Initialization screen

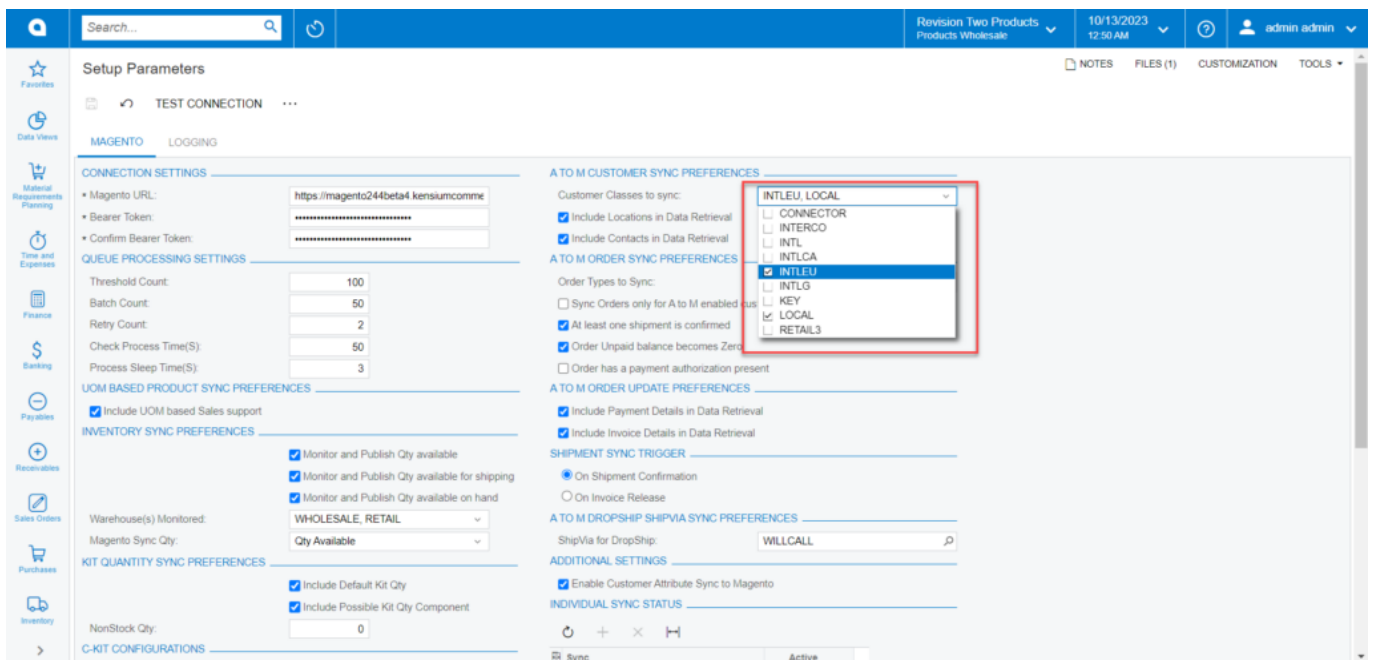

By package publish MSMQ Service and Endpoint Setup will be published. Then the connector will check whether the Commerce Basic package is published or not. The rest of the Generic enquiries will be published. The connectors will create automatically necessary GIs, Push Notifications and Schedulers.

The screenshot shows the 'Generic Inquiry' configuration page. The 'CONDITIONS' tab is active, displaying a table of conditions:

Active	Brackets	Data Field	Condition	From Schema	Value 1	Value 2	Brackets	Operator
<input checked="" type="checkbox"/>		GeneralContact.EMail	Is Not Empty	<input type="checkbox"/>				And
<input checked="" type="checkbox"/>	(	Customer.CustomerClassID	Equals	<input type="checkbox"/>	= 'INTLEU'			Or
<input checked="" type="checkbox"/>	)	Customer.CustomerClassID	Equals	<input type="checkbox"/>	= 'LOCAL'		)	Or

Conditions in the GI

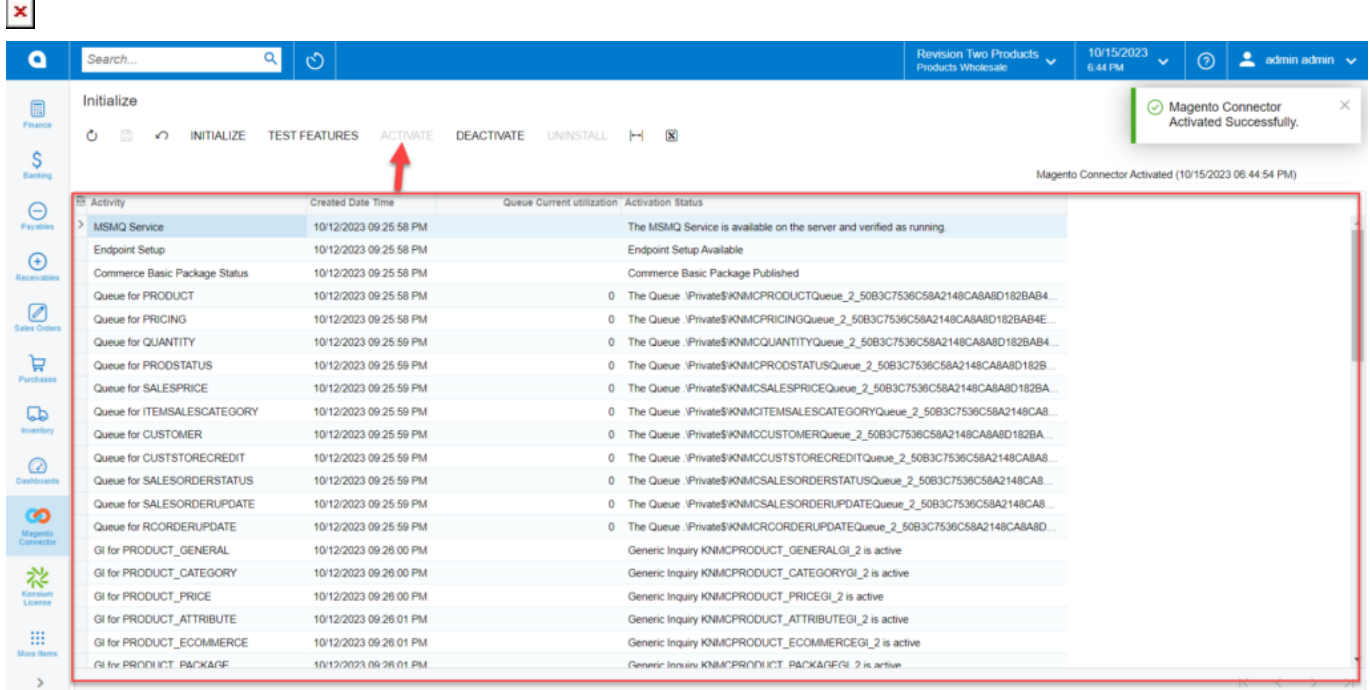

The screenshot shows the 'Setup Parameters' page. A dropdown menu is open, showing a list of customer classes. The 'INTLEU' option is selected and highlighted with a red box.

- INTLEU LOCAL
- CONNECTOR
- INTERCO
- INTL
- INTLCA
- INTLEU**
- INTLG
- KEY
- LOCAL
- RETAIL3

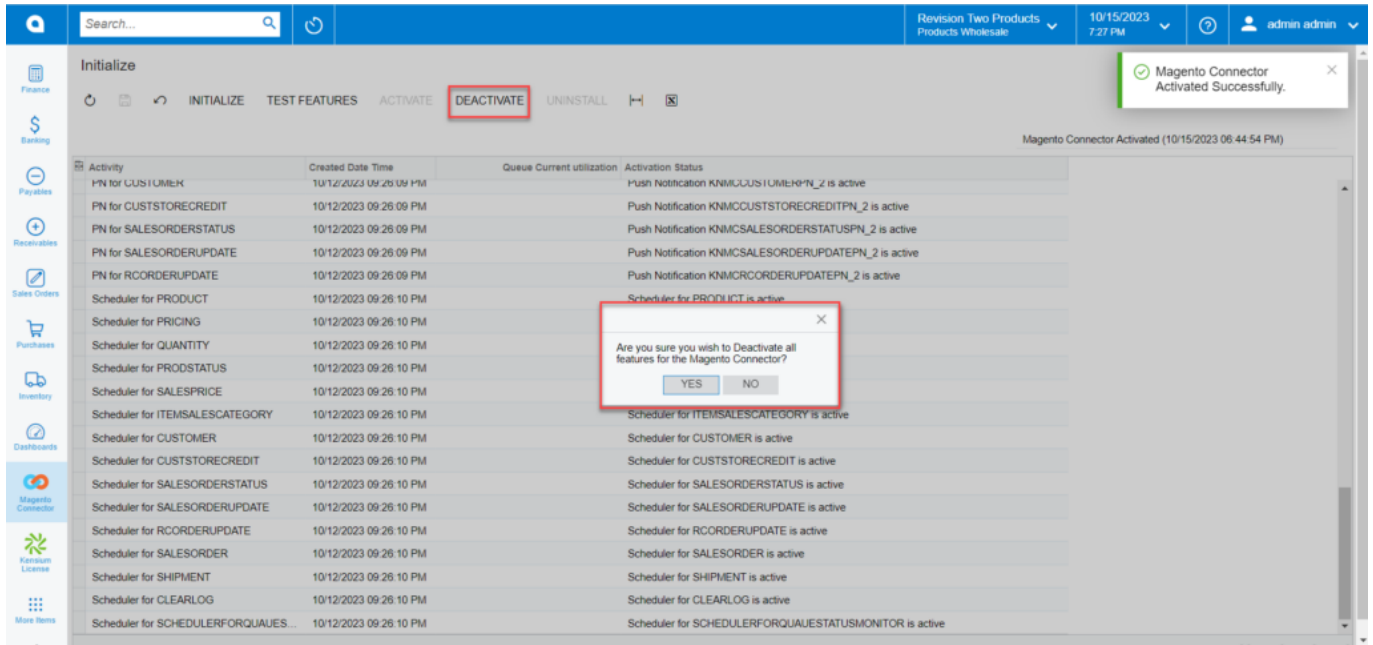

Condition Under the Set of Parameters

Push Notifications are used to send the data from the connector. GI is used to filter data. Automate schedulers are used to process the data through the connector to sync from Magento to Acumatica.

Initialization screen when activated

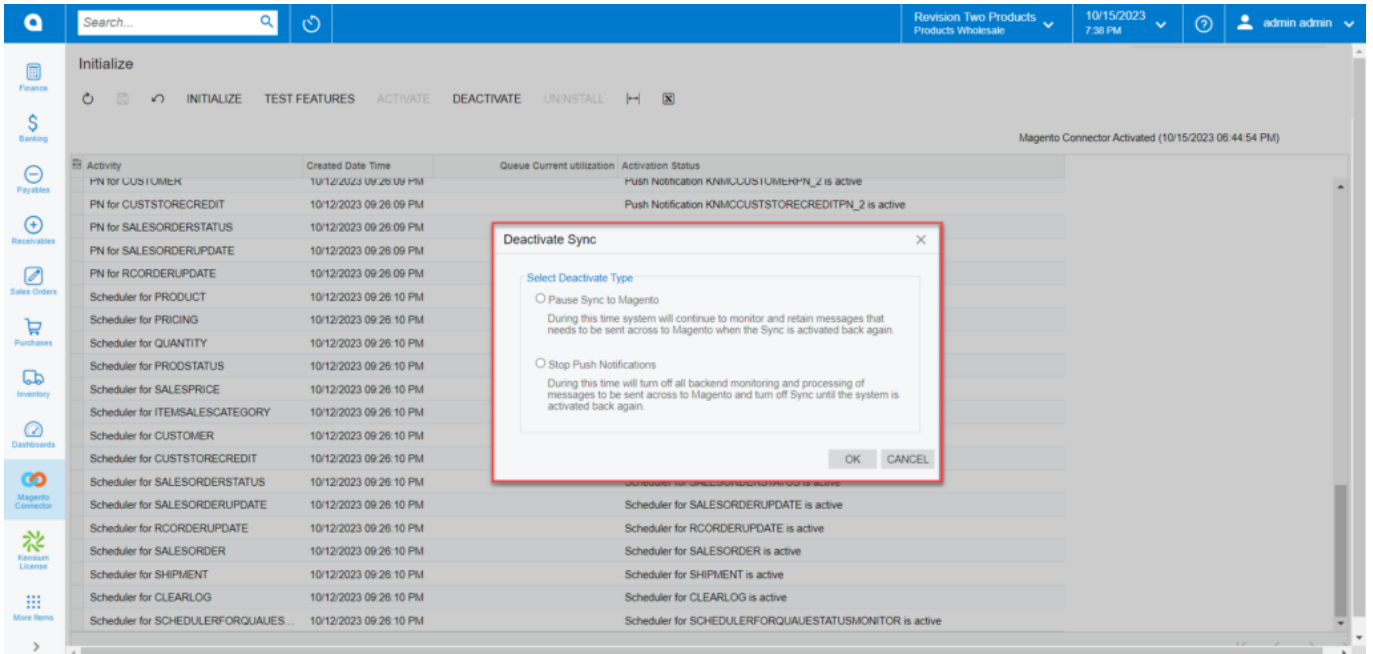

To deactivate, a pop-up will appear on the screen. You need to click on [Yes] to deactivate.

### Deactivate screen in the Magento connector

In the Deactivate Sync pop-up, you will have two options.

1. **Pause Sync to Magento:** If you select this radio button to enable it the system will continue to monitor and retain the messages that need to be sent to Magento when the Sync is activated back again.
2. **Stop Push Notification:** If you select this radio button to enable it the system will turn off all the backend monitoring and processes of messages to be sent across to Magento and turn off Sync until the system is activated again.

The screenshot shows the 'Initialize' page of the Adobe Connector interface. A 'Deactivate Sync' dialog box is open, allowing the user to choose how to deactivate synchronization. The dialog contains the following text:

**Deactivate Sync**

Select Deactivate Type

- Pause Sync to Magento  
During this time system will continue to monitor and retain messages that needs to be sent across to Magento when the Sync is activated back again.
- Stop Push Notifications  
During this time will turn off all backend monitoring and processing of messages to be sent across to Magento and turn off Sync until the system is activated back again.

Buttons: OK, CANCEL

Option in the Deactivate Sync
