KENSIUM
Adobe Connector

Managing Product Schema

After clicking on the Product Schema under the APIs option the application will open the product schema screen as shown below. From the screen, you can view the data which can be formatted in JSON format.

In this format, the data will then be transferred from Acumatica to Magento.

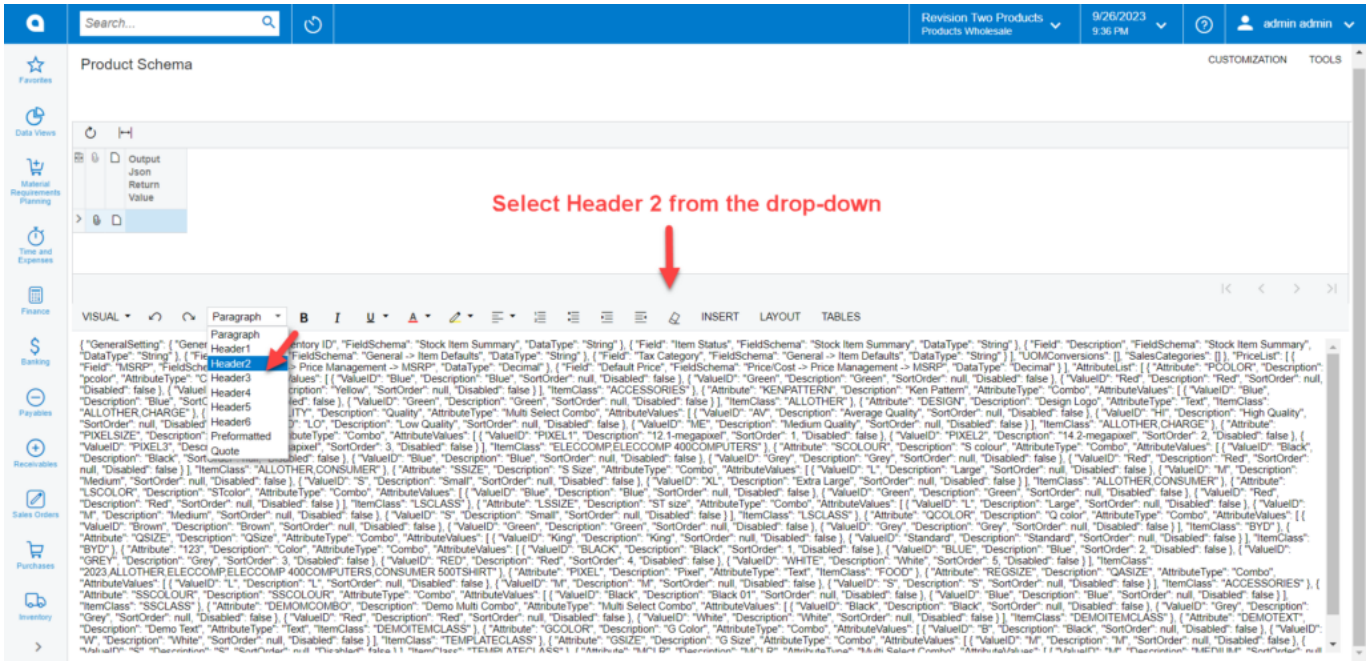

The Product Schema API schema

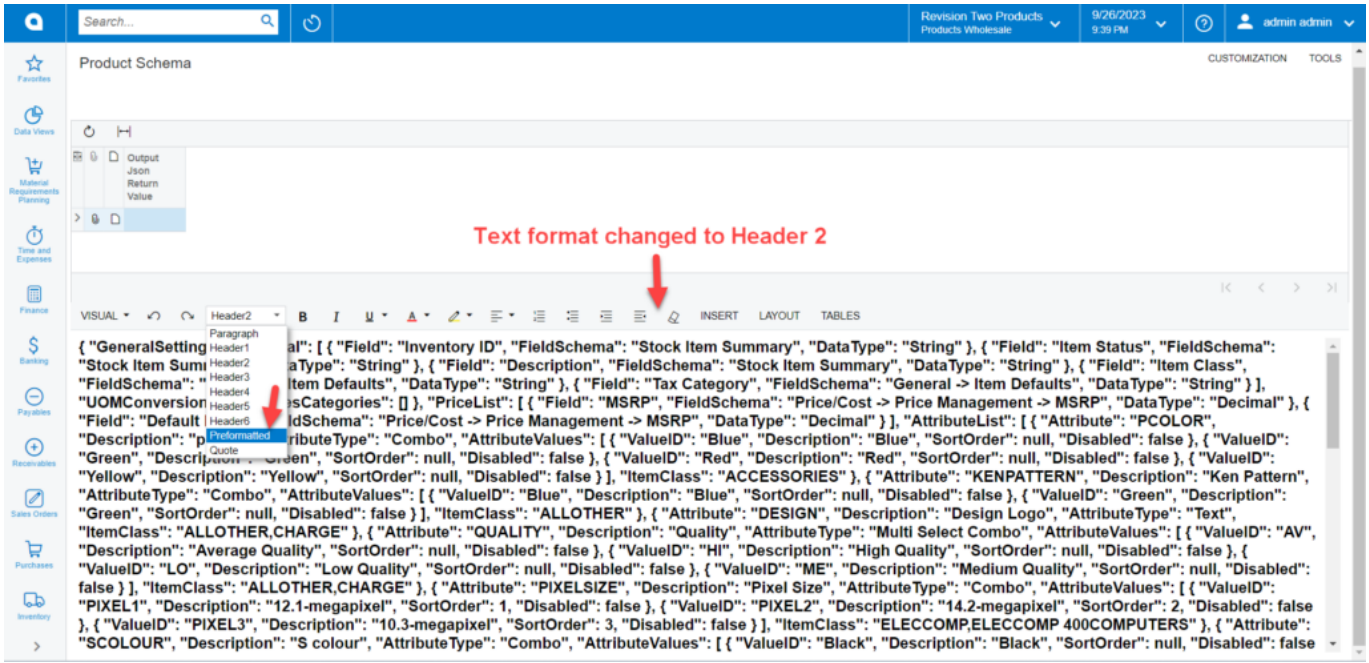

You need to select Header 2 from the drop-down of the text box.

KENSIUM

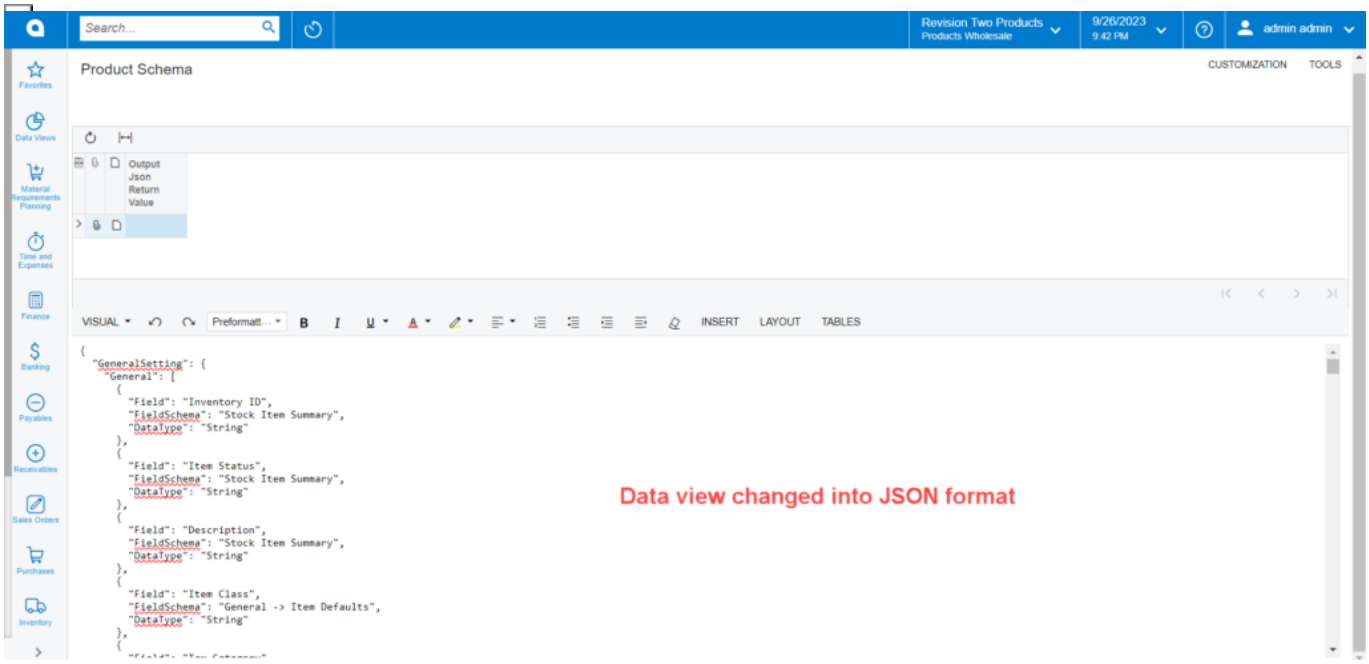

Select Header 2 from the drop-down

Select the Preformatted option once the text is changed to Header 2

© 2025 Kensium LLC

After selecting the data in the [Preformatted] format, the data will be converted to JSON format. In this format, the data will be transferred from Acumatica to Magento Connector.

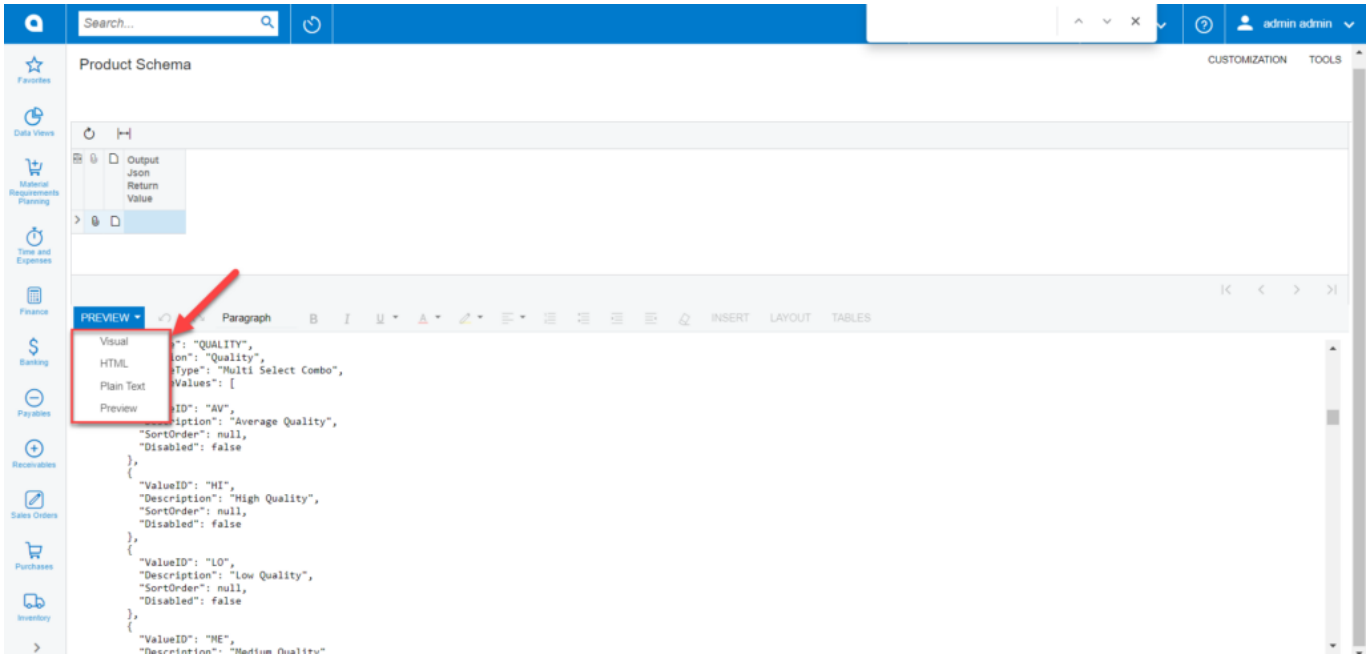

Data view in the JSON format

The text box allows you to view the data in the following formats:

- **Visual**
- **HTML**
- **Plain Text**
- **Preview**

You can choose your desired format from the left-hand corner of the text box.

Option to change the format

This includes the field name and the data type that will be passed to Magento from Acumatica. This only contains the values which you have selected in the **[Product Schema]** section.
