

# Managing Stores in Magento

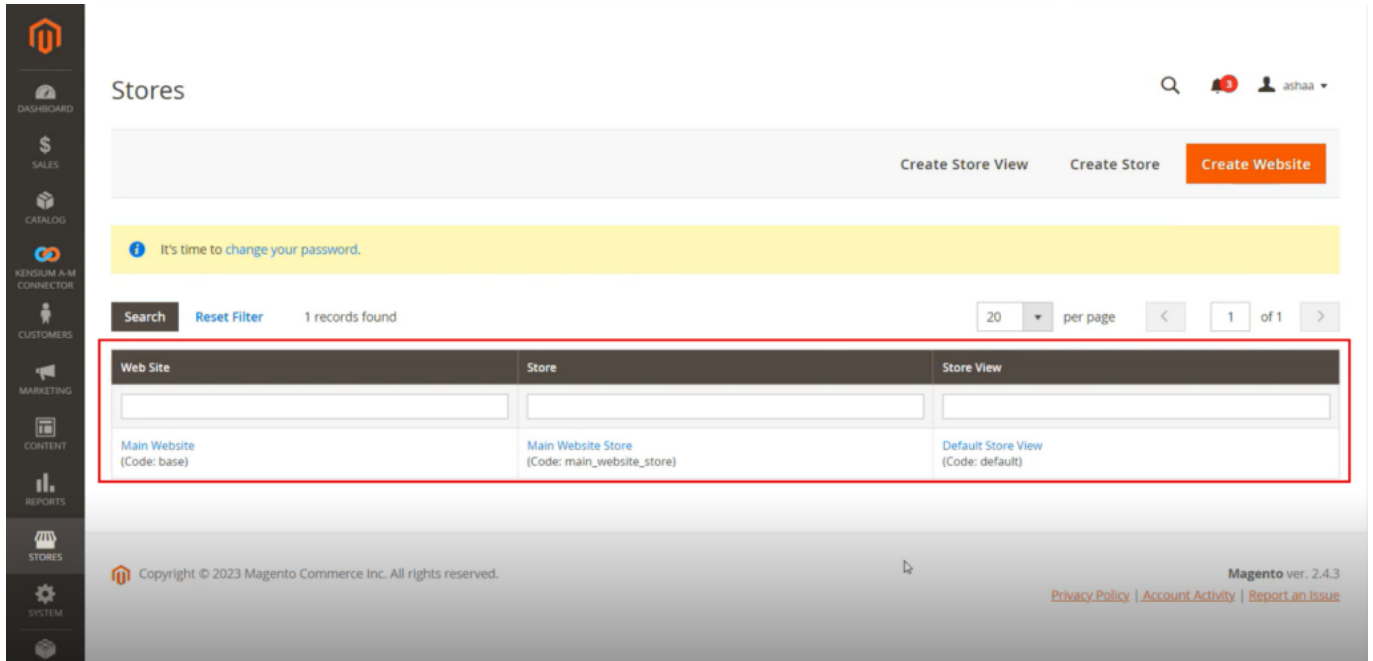

In Magento you will have multiple [Stores] whereas in Acumatica you will have multiple Warehouses. In Magento go to the [Stores] on the left panel and under [Settings] you will be able to view an option for [All Stores].

The screenshot shows the Magento Admin interface. On the left, the 'Stores' menu is open, highlighting 'All Stores'. The main content area shows a table of Acumatica Payment Methods. The table has three columns: 'Acumatica Payment Method', 'Acumatica Cash Account', and 'Store View'. The table contains several rows of data, including 'PAYMENT' methods and 'CASH ACCOUNT' entries.

Acumatica Payment Method	Acumatica Cash Account	Store View
	10100	All Store Views
PAYMENT	10250	All Store Views
	10200	All Store Views
PAYMENT	10250	All Store Views
	10100	All Store Views
ENTREE	10600	All Store Views
X	10600	All Store Views
ENTREE	10600	All Store Views
CK	10200	All Store Views

By default, Magento will show you one website upon clicking the [All Stores]. If you want to maintain multiple websites, you can create [Stores].

If you have multiple stores and you want to manage it with Acumatica Warehouse data, you can configure it as shown in the above screenshot. Once both are set up, you need to map the warehouse data in Magento from the configuration.
