

# Managing Stores in Magento

In Magento you will have multiple [Stores] whereas in Acumatica you will have multiple Warehouses. In Magento go to the [Stores] on the left panel and under [Settings] you will be able to view an option for [All Stores].

Acumatica Payment Method	Acumatica Cash Account	Store View
	10100	All Store Views
PAYMENT	10250	All Store Views
	10200	All Store Views
PAYMENT	10250	All Store Views
	10100	All Store Views
ENTREE	10600	All Store Views
X	10600	All Store Views
ENTREE	10600	All Store Views
CK	10200	All Store Views

By default, Magento will show you one website upon clicking the [All Stores]. If you want to maintain multiple websites, you can create [Stores].

The screenshot displays the 'Stores' configuration page in a Magento 2.4.3 environment. The page features a sidebar with navigation icons for Dashboard, Sales, Catalog, KENSIUM A-M CONNECTOR, Customers, Marketing, Content, Reports, Stores, and System. The main content area is titled 'Stores' and includes a search bar, a notification banner stating 'It's time to change your password.', and a table with the following data:

Web Site	Store	Store View
<a href="#">Main Website</a> (Code: base)	<a href="#">Main Website Store</a> (Code: main_website_store)	<a href="#">Default Store View</a> (Code: default)

The footer of the page contains the copyright notice 'Copyright © 2023 Magento Commerce Inc. All rights reserved.' and the version information 'Magento ver. 2.4.3'. There are also links for 'Privacy Policy', 'Account Activity', and 'Report an Issue'.

If you have multiple stores and you want to manage it with Acumatica Warehouse data, you can configure it as shown in the above screenshot. Once both are set up, you need to map the warehouse data in Magento from the configuration.
