

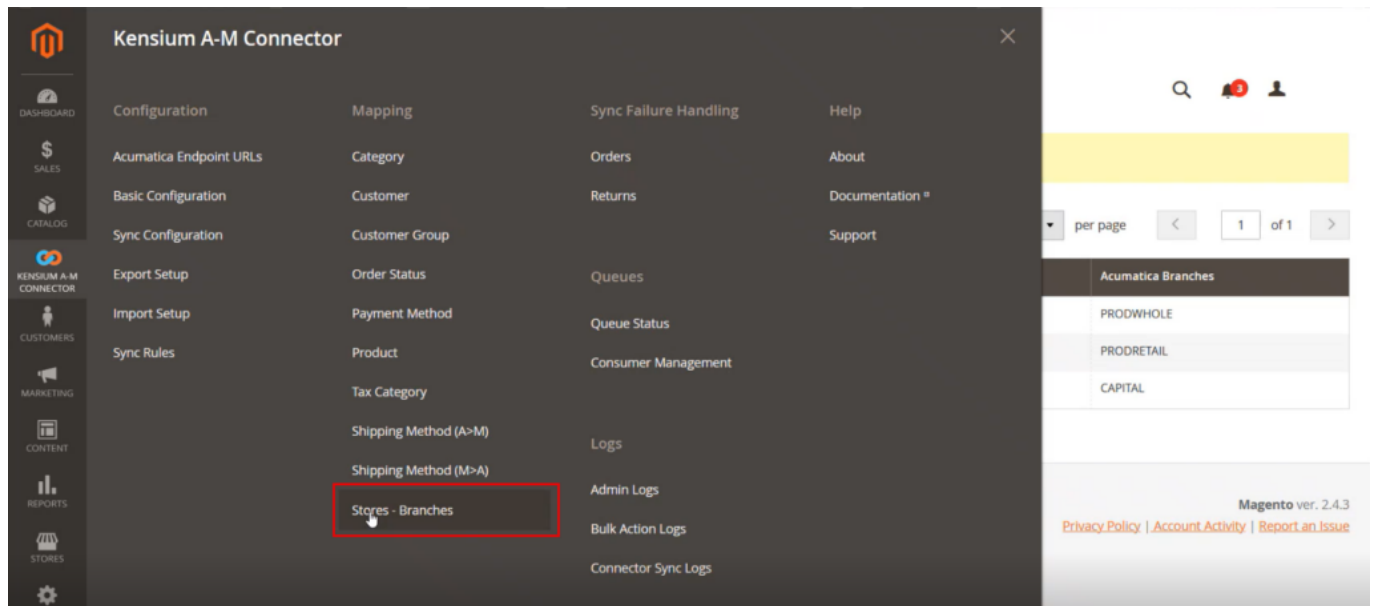

Mapping of Stores and Branches

You need to map the stores and the branches by applying the following process:

Step 1. Go to Kensium A-M connector and click on the Stores -Branches under the mapping section.

In Magento, the terminology is Stores and the same in Acumatica is Branches.

Step 2. Similar to the Product Mapping you need to click on the option and the following screen will appear.

Step 4. In the Product Summary, you will be able to see all the product details.

The screenshot shows the 'Product Summary' form in the Kensium Adobe Connector interface. The left sidebar contains navigation links: DASHBOARD, SALES, CATALOG, KENSIUM A.M. CONNECTOR, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The top right has buttons for 'Back', 'Add Attribute', and 'Save'. A yellow banner at the top states 'It's time to change your password.' The form fields include:

- Enable Product** (website): A toggle switch set to 'Yes'.
- Attribute Set**: A dropdown menu showing 'WB2809'.
- Product Name** (store view): A text field containing 'WATER2809_'.
- SKU** (global): A text field containing 'WATER2809'.
- Price** (global): A text field containing '\$ 20.00'. Below it is a link for 'Advanced Pricing'.
- Tax Class** (website): A dropdown menu showing 'TAXABLE'.
- Weight** (global): A text field with 'lbs' and a dropdown menu showing 'This item has weight'.
- Visibility**: A dropdown menu showing 'Catalog, Search'.

Step 5. Under the [Products in Website] you will get the option. If you have added the product concerning the website, you will see the checkbox. The check box will be checked because all the products are added to the main website. In the case of multiple websites where the product belongs to that website should be checked. In those cases, the website where the product is available should be checked and the rest would be unchecked. So that indicates that the specific product belongs to the respective store.

In Acumatica if you create a product and the product is assigned to any warehouse and the warehouse is mapped to Magento Store then only the website will be selected here.

☒ Main Website ?

This is how the data is segregated into Sotes and Branches mapping. If the product is available in multiple stores those websites would be checked.
