Product Schema in Acumatica

By clicking on the Product Schema Acumatica will open the [Product Schema] screen which includes **[Refresh Schema]** and **[Clear Schema].** In the first place, the screen should appear blank. All the tabs like [General Settings], [Price/Cost Information], [Attributes], [Ecommerce Data], [Related Items], [Packaging], and [Cross Reference Details] should be banked. They should not contain records under all these columns.

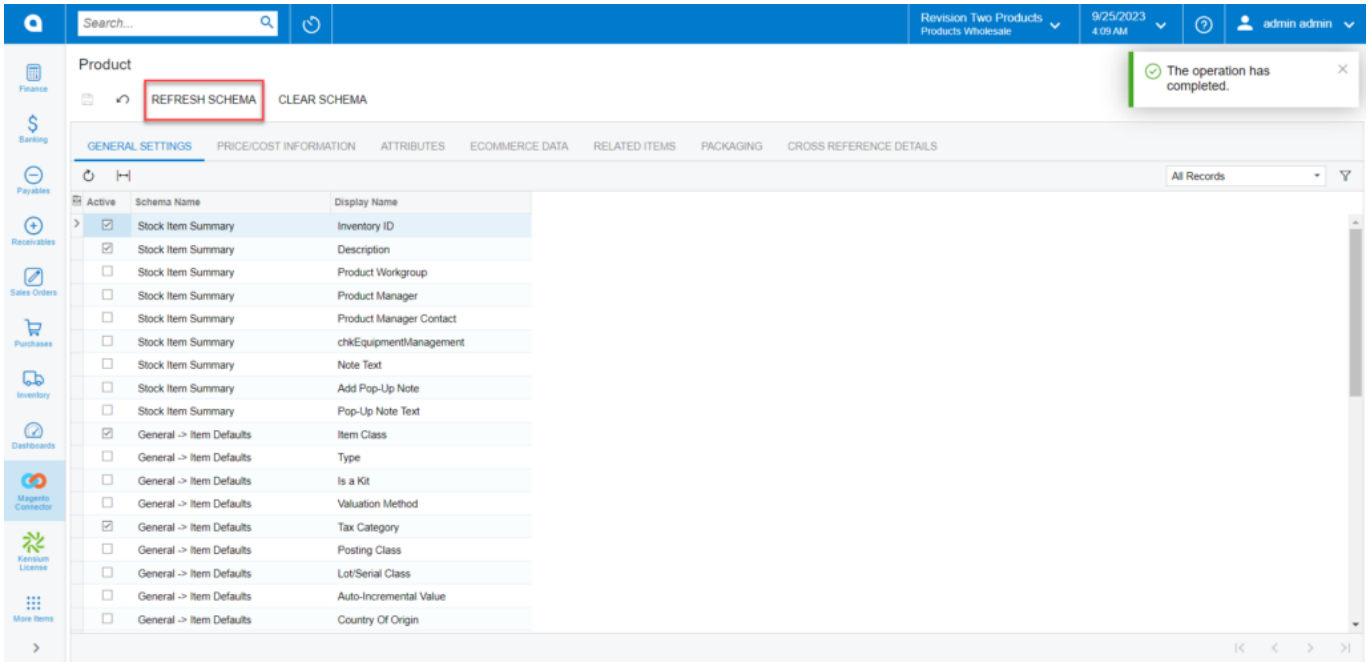

In the first place, the columns should be blank

- **Refresh Schema:** By clicking on this option, the application will run a process and pull up all the fields. This will retrieve all the field names which have been used in the application. Under the General Settings, the application will show the Schema Name and Display Name. Display Name is the field label name used in Acumatica.
