Serialized Inventory

Individual units are tracked using unique serial numbers in serialized inventory. Serial numbers are not the same as SKU numbers. Serial numbers identify a specific item or component of an item, whereas SKU numbers designate a type of product.

Build Your Own Products (BYOP) enables you to inspect serialized inventory in the system along with attribute and component details.

1. Navigate to Inventory, click **"Serialized Product Info"** option from the submenu.
2. Click the selector icon to view all serialized inventory in the system.
