

Non-Stock Items

The screenshot displays the Acumatica 'Item Classes' configuration page. On the left, the 'Item Class Tree' shows a hierarchy of classes, with 'CHARGE - Miscellaneous Charges' selected and highlighted in a red box. The main configuration area shows the 'Attributes' tab for this class. A table lists attributes with columns for 'Active', 'Attribute ID', 'Description', 'Sort Order', 'Required', 'Control Type', 'Category', 'Merchandising Section', 'Section Sort Order', 'Row Position', and 'Column Position'. Two attributes are listed: 'AMBAT - AMCTOBAT Colors' and 'AMBAT - AMCTOBAT Length'. Below the table are sections for 'Inventory ID Segment Settings' and 'Description Segment Settings', each with a table for defining segment types, attribute IDs, constants, numbering IDs, and character separators.

Item Classes

- The created **[Item Class]** is reflected under Item Class.
- Select the **[Item Class]**.

Non-Stock Items

Merchandise

- Click on the **[Merchandise]** tab.
- You can view the mapped Merchandise attributes.
