KENSIUM
Customizable Kits

# Introduction

**Customizable KITs (C-Kits)** are groupings of products or components that can be modified or customized to meet unique preferences or needs. These kits often consist of a variety of interchangeable parts or components that can be combined to provide a specific arrangement.

**C-KITs** is an extension in **Acumatica ERP** that allows users to easily modify the **quantities of components** for non-stock kits **while placing an order**.
