

Steps to enable KIT item quantity as variance in Acumatica

1. On the Kits Specifications screen, navigate to Non-Stock Components, choose the Component ID, and check the box for **“Allow Component Qty. Variance.”**

The screenshot shows the Acumatica interface with the 'Kit Specifications' screen. The 'NON STOCK COMPONENTS' tab is selected. A table lists components, with the 'Extended warranty' component highlighted. The 'Allow Component Qty. Variance' checkbox is checked for this component. Other visible elements include the 'Customizable Kit' checkbox and the 'Price will be the Sum total of child components' note.

* Component ID	Description	* UOM	Component Qty.	Allow Component Qty. Variance	Min. Component Qty.	Max. Component Qty.
> INDEX...	Extended warranty	YEAR	2.00	<input checked="" type="checkbox"/>		

Allow component quantity variance

Note:

Other component items that are not identified as variance cannot be altered; the only alternative is to add new line items to the Sales order.
