

# KIT Explode and Price Distribution

 The KIT explode function in Acumatica effectively handles fractional values that may arise when exploding a parent product.

For example, if there is an adjustment of \$1000 and the quantity of the parent item is 3, it ensures that each quantity is not associated with an uneven fractional value i.e., \$333.333. Instead, it distributes the price of the parent kit item among the child component items based on their respective quantities, ensuring a fair allocation.

While creating a Sales Order, If the **'Not to Explode on API Sync'** checkbox is enabled in both **Kit Specifications** and **Item Class** screens, then the non-stock kit item will remain unexploded in the sales order.
