

KENSIUM

Kensium Commerce Framework

# Installing The Connector Package

The first step to installing the feature is to run the latest version of the KCF package.

To begin, the following pre-requisites are necessary for the installation and configuration of the Kensium Commerce Framework:

- The latest version of the Commerce Basic package.
- Save the .zip file of the KCF package to the local hard drive.
- Navigate to the **[Customization]** workspace.
- Click **[Customization Projects]**.
- Click the **[Import]** button.
- Select **[Import New Project]**.
- Select the KCF Package .zip file from a local folder.
- Click **[Upload]**.
- In the Levels column, indicate the level at which the package needs to be published.
- Toggle on the box(es) of the packages that need to be published.

If a package is already published in the instance that needs to remain published, the package should have a level value associated with it, and the box should be toggled on prior to publishing.

- Click the **[Publish]** button.
- Click **[Save]**.

**Note:** The package can be obtained through a VAR using the Acumatica portal, through an Account Manager by contacting the Acumatica Helpdesk, or through the Acumatica public site.

## Customization Projects with both Commerce Basic and the KCF Packages

If the packages must be published to multiple companies:

- Click the down arrow on the **[Publish]** button.
- Select **[Publish to Multiple Tenants]**.
- When the Publish to Multiple Tenants pop-up screen appears
- Select the checkbox(es) for the company name(s) to publish the package(s).
- Click **[OK]**.
- After installing the customization package, the connections must be established between Acumatica and the Commerce package.
