BridgePay

Menu: Manage POS / Bridgepay

Feature: Bridgepay

Editions: Cloud

Use this page to control the integration with Bridgepay credit card payments. All fields must be entered from the integration details supplied by Bridgepay. These fields include:

- `User Name`
- `Password`
- `Public Key`
- `Private Key`
- `Merchant Code`
- `Merchant Account Code`

Consult the Bridgepay documentation for the meaning of these fields, and how they are used.

> The private key and password fields are securely stored when they are entered.

Test Mode

The page also contains a `Perform transactions against Bridgepay's test endpoint` checkbox.

Select the checkbox when testing against test Bridgepay's test servers. When enabled:

- XMS will contact Bridgepay's test servers, rather than production servers, to process payments.
- Bridgepay will require the usage of test credit card numbers, expiry dates and CVC. For your convenience these are listed in the checkout page in a dropdown panel.

- Bridgepay will fail any transactions that are less than $5, or greater than $100. This is to test error handling. Transactions between $5 and $100 will pass.
