

Checkout

 The Checkout feature of Kensium POS provides for customers and sales persons to place (check out) orders for products. The checkout process is highly configurable. First, it's beneficial to understand the checkout process and how it looks to customers and salespeople.

a) Checkout Page

The checkout process starts with a page to identify the user and customer. This process is slightly different depending on whether the checkout is launched from the Cart App, Ecommerce pages, or Order Pad.

Cart App & eCommerce

When checking out from the Cart App or ecommerce pages, the user is a Customer. They'll see something like the following:

A screenshot of a checkout page interface. At the top, there is a progress bar with three steps: "Options" (selected with a blue dot), "Shipping", and "Place Order". Below the progress bar, the page is divided into three main sections. The first section, titled "ACCOUNT" with a user icon, contains the text "Have a customer account? Please sign in now to re-use your saved shipment and payment information." and a "Sign In" link. The second section, titled "CHECKOUT OPTIONS" with a gear icon, contains the text "Choose a checkout option to continue." and a radio button labeled "Order" which is selected. Below this, it says "Place an order and have it shipped to you." The third section is a large blue button labeled "Continue".

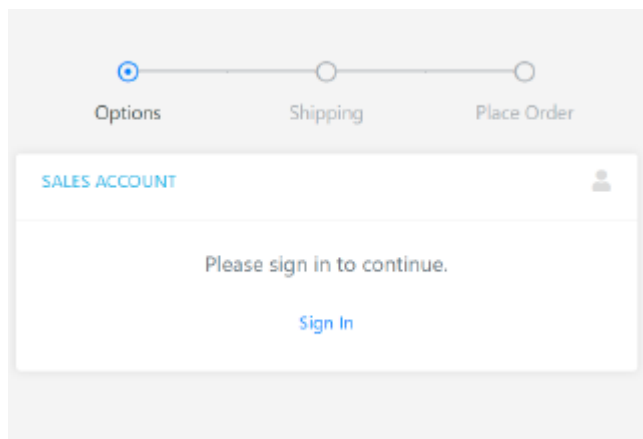

The functions of this page are to:

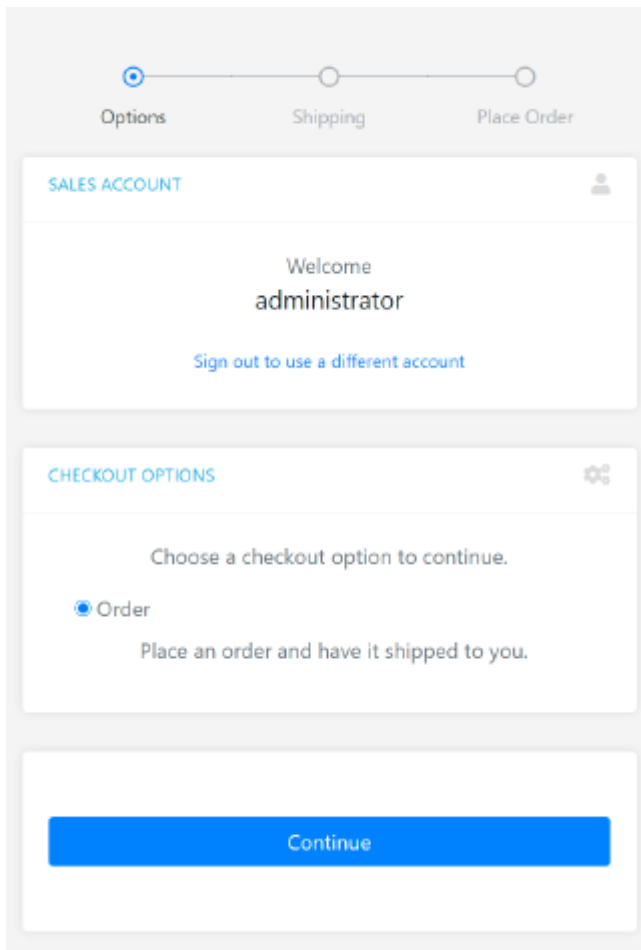

- Enable the customer to sign in with their customer account.
 - Depending on POS configuration, sign-in can be required or it can be optional.
- Choose the checkout method that they will use for the order.
 - Checkout methods can represent things like different types of shipping methods, or even different types of orders.

Order Pad

The start of the checkout process is similar in Order Pad:

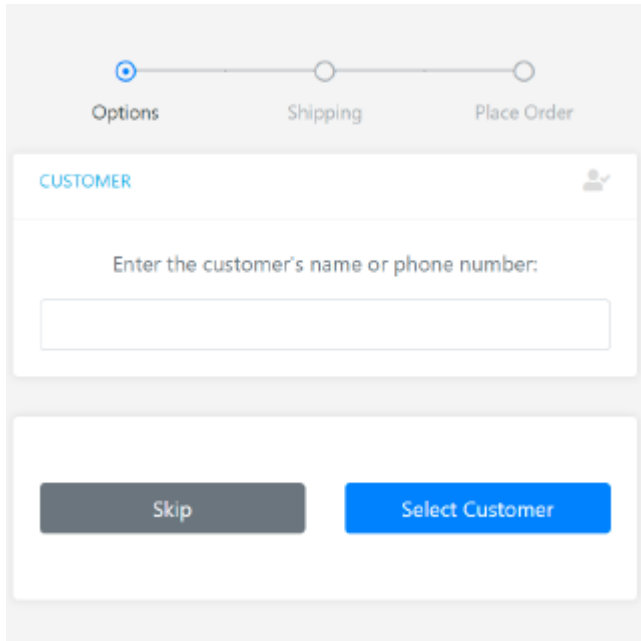

The page requires that the user - in this case a salesperson - signs in to their account. Once signed in, the salesperson will see the checkout methods that are available to them:

A screenshot of a checkout interface. At the top, a progress bar shows three steps: "Options" (active with a blue dot), "Shipping" (inactive with a grey dot), and "Place Order" (inactive with a grey dot). Below the progress bar is a "SALES ACCOUNT" section with a user icon, displaying "Welcome administrator" and a link "Sign out to use a different account". The next section is "CHECKOUT OPTIONS" with a gear icon, containing the text "Choose a checkout option to continue." and a radio button labeled "Order" with the description "Place an order and have it shipped to you.". At the bottom is a large blue "Continue" button.

The list of checkout methods for Order Pad and Cart App may be different, depending on configuration of the checkout methods.

The next difference is that the sales person will need to select the customer that they are creating the order for:

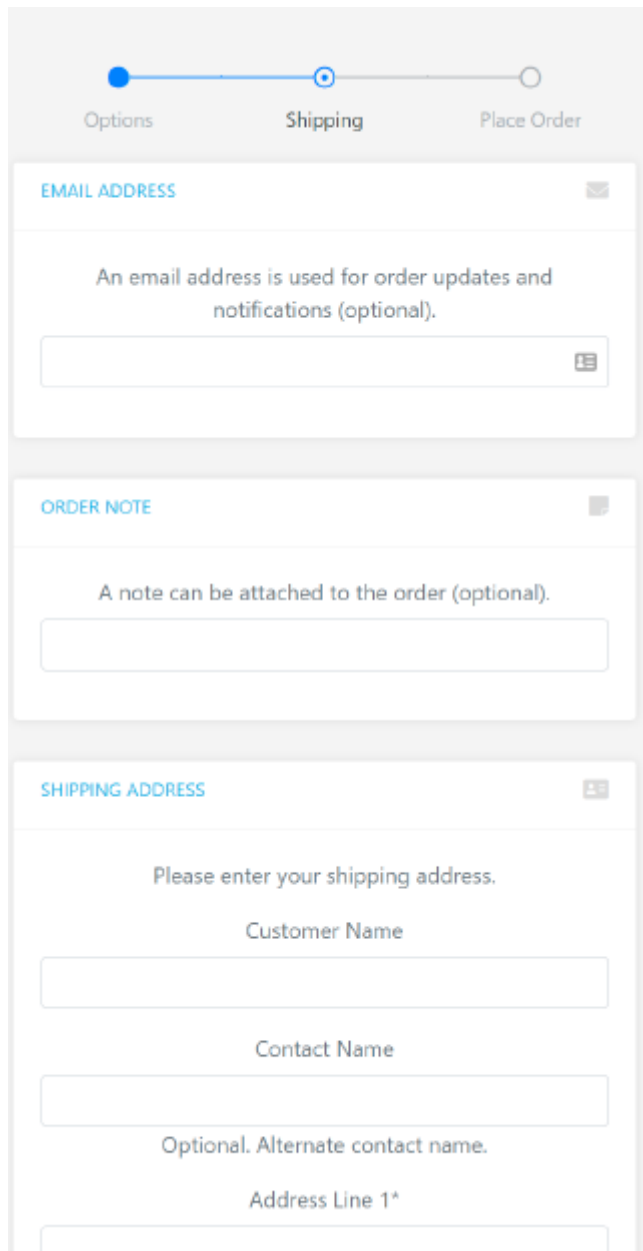

A screenshot of the Kensium POS interface showing the "CUSTOMER" selection screen. At the top, a progress bar has three steps: "Options" (selected with a blue dot), "Shipping", and "Place Order". Below the progress bar, the word "CUSTOMER" is displayed in blue. Underneath, there is a text prompt "Enter the customer's name or phone number:" followed by a white input field. At the bottom, there are two buttons: a grey "Skip" button and a blue "Select Customer" button.

The salesperson can begin typing the name or phone number of the customer, and they can select a customer from a list of matching customer accounts.

The Skip option allows the salesperson to create the order against the default Online customer configured for Kensium POS. This option may or may not be available, depending on the configuration of the checkout method.

b) Shipping

The next step of the checkout process gathers information related to shipping, pickup and other order processing options. The contents of the page differs according to the options configured for the selected checkout method.

The form is presented in a mobile-style layout with a light gray background. At the top, a progress bar shows three steps: "Options" (completed, with a blue dot), "Shipping" (current step, with a blue dot and a blue line), and "Place Order" (not started, with a gray dot). Below the progress bar are three white form sections. The first section, titled "EMAIL ADDRESS" in blue, includes an envelope icon and explanatory text. The second section, titled "ORDER NOTE" in blue, includes a notepad icon and explanatory text. The third section, titled "SHIPPING ADDRESS" in blue, includes a location pin icon and explanatory text, followed by four input fields for customer and contact names and address lines.

The functions of this page are to:

- Capture the customer's email address. The email address can be used for order status notifications, for example.
- Enter an order note for the order.
- Capture the shipping address for the order.
 - Optionally save the shipping address to their account for future orders.

- Enable the user to select and/or edit a shipping address that is already saved to their account.
- Optionally select a pickup location for the order.
- Enter the customer name.
 - This is usually included with the shipping address, but may be captured separately for orders that are not shipped.

This page is skipped during checkout if no information needs to be gathered from the user. This can be the case if the checkout method does not require entry of certain fields, and/or if default options can be selected automatically.

c) Order Confirmation

The final page in the checkout process displays the cart contents, including calculated prices and taxes, and includes payment options.

☐ Save this card to the customer's account to make future purchases easier.

Place Order

The functions of this page are to:

- Summarize the customer information.
- List the order items, with quantities and prices.
- Show order subtotal, taxes, and order total.

- Apply payment.
- Accept tePOS of service.
- And complete the order.

Payment options will depend on checkout method configuration, but in generally they are:

- On Account may be enabled depending on the checkout method configuration.
- Payment through credit cards is enabled if a payment provider is configured.
- If the customer is signed in to their account:
 - Save a payment method to the customer account for usage in future orders.
 - Select and use a previously saved payment method.
- Saving the order without payment may be allowed for certain types of orders (e.g. quotes).

A salesperson creating an order (via Order Pad) for a customer cannot save or recall payment methods to the customer's account.

Finally, if enabled by checkout options configuration - and the customer does not have an account - the customer may request that an account be created when the order is submitted:

The screenshot shows a 'CREATE ACCOUNT' form. At the top, there is a blue banner with the text: 'Creating an account has many benefits, from being able to re-use your payment and shipping information, and to take advantage of other services.' Below the banner is a checkbox labeled 'Create an account for me (optional)'. Underneath the checkbox are two input fields: 'Account Email' with the value 'bob.smith@fusionrms.com' and 'Password' which is currently empty. Both input fields have a small icon on the right side of the text box.

d) Configuration

See the following help topics to understand how the checkout process can be configured:

- [Checkout Methods](#)
- [Checkout Options](#)
