Version 5.2.10

Release notes now include new features and bug fixes for all POS components. These components include:

- Kensium Register

Bug Fixes / Critical Improvements

748 Kensium Register – The tax rate is still changes based on the customer address if you check/uncheck Customer is present on the transaction

- The Register now always uses the correct source/destination addresses when creating an AvaTax request packet.

514 Kensium Register – Avalara Tax Calc Issue on Tender

- The Register now always uses the correct source/destination addresses when creating an AvaTax request packet.

1341 Kensium Register – Adding quantity to a quote item after recall does not trigger price break

- To correct the error, it was necessary to add a new process when loading documents, this to fill the cross-item structure, which is used to calculate the quantities and products stored in the sale, so when a quote is loaded, the new process is executed and fills the structure for when a new element is added, it takes the data of the document (item/quantity) of the structure and continues with the calculation of the sale.
