Products

The Products feature of Kensium POS provides a public face to inventory records, via product listings displayed in the Cart App, Order Pad and ecommerce pages.

The feature introduces several concepts to provide these product listings:

- [Products](#) for the individual product (inventory) records
- [Product Sections](#) and [Product Groups](#) to categorize products
- [Product Banners](#) to display optional banner text on categories and sections
- [Product Notices](#) to supply standard text for multiple products
