KENSIUM
OrderPad

Range of Functionality

- Identification and Capture of Customer Information
    - Sales associates can recognize customers and record pertinent information, such as contact details or details related to loyalty programs, to provide personalized services.
- Saving, Recalling the Order
    - Sales associates can store orders on the OrderPad for later retrieval on another device, enabling seamless transactions within the store or when transitioning Order Management responsibilities. Adding Shipping/ Pickup Information
    - When relevant, sales associates have the option to incorporate shipping details or specify preferences, ensuring a streamlined order fulfillment process.
- Recall & and Tendering the Order
    - Checkout associates can retrieve the saved cart at the register for editing or tendering, and subsequently conclude the sales process by processing payments, generating receipts, and ensuring a seamless checkout experience for customers. This signifies the conclusion of the order creation phase utilizing the OrderPad.
