

Configuring Kensium POS

You need to configure Kensium POS within the OrderPad Admin. Upon clicking on Kensium POS on the left panel you will have the following options.

- Configuration
 - POS
 - Roles
 - Print Receipt
 - Retail Location
- RMS
 - Terminals
 - Terminals Location Mapping

Options under POS

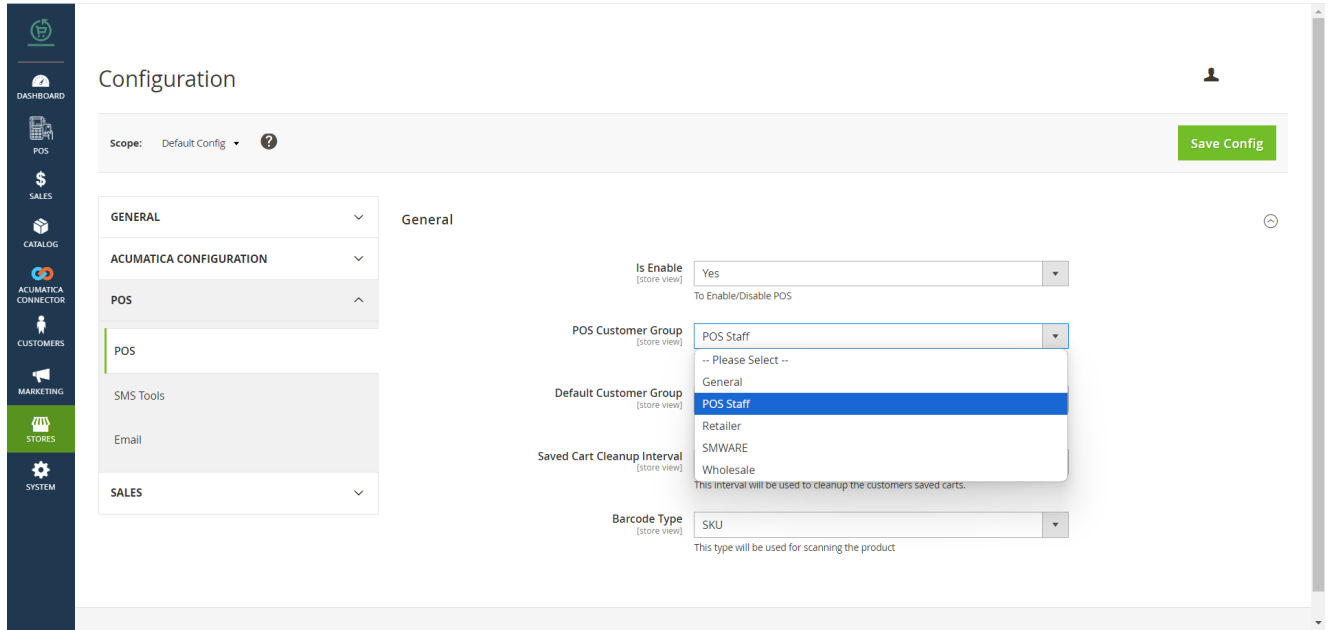

Upon clicking on the POS, you will be redirected to the POS Configuration Screen.

You need to select the following to configure & Enable the OrderPad.

Field	Field Type	Description
KENSIUM POS (General)		

Is Enable	Dropdown Selection	Options available • Yes • No Select [Yes] to enable the OrderPad. By selecting No, OrderPad will be disabled.
POS Customer Group	Dropdown selection	The staff created in the OrderPad will be treated as a customer and this option lets you configure the C in Acumatica. You will get an option to map the POS Customer Group for the Staff members. The staff created in the POS Customer Group should be mapped Acumatica Customer Class and Acumatica Price Class for any special discounts to Staff.

Default Customer Group	Dropdown Selection	When a staff member is no longer part of the organization, deleting them will keep them as customers in the OrderPad, but the Staff member's customer group will be changed to the one selected in this configuration. So, select the Customer group used for regular customers.

Saved Cart Cleanup Interval	Dropdown Selection	You can store the customer’s items in the saved cart, anticipating that the customer might return and continue after a certain period for order processing. In the meantime, you can proceed with serving other customers. If the customer doesn’t return, the record in the cart should be cleared. The saved order in the cart will be automatically deleted based on the hours configured during setup. The application enables you to set the cleanup interval within a range of 1-10 hours, and you must select the appropriate interval from the drop-down menu.
Barcode Type	Dropdown Selection	You have two alternatives: you can either scan the barcode affixed to the product or utilize the SKU (Stock Keeping Unit).

The above details explain the General Configuration to connect with the OrderPad.

The screenshot displays the 'Configuration' page in the Kensium OrderPad interface. On the left is a dark blue sidebar with navigation icons for Dashboard, POS, Sales, Catalog, Acumatica Connector, Customers, Marketing, Stores, and System. The main content area is titled 'Configuration' and shows a 'Scope: Default Config' dropdown and a 'Save Config' button. A left-hand menu lists categories: GENERAL, ACUMATICA CONFIGURATION, POS, SMS Tools, Email, and SALES. The 'General' configuration section is expanded, showing five settings:

- Is Enable** (store view): Yes (To Enable/Disable POS)
- POS Customer Group** (store view): POS Staff (For staff customers this group will be used.)
- Default Customer Group** (store view): General (This group will be used when staff customer is removed from the location.)
- Saved Cart Cleanup Interval** (store view): 10 Hours (This interval will be used to cleanup the customers saved carts.)
- Barcode Type** (store view): SKU (This type will be used for scanning the product)

The 'General Configuration' label is visible at the bottom of the configuration area.
