Sellercloud Connector

Inventory Preferences

Inventory preferences involve how the inventory is managed and tracked within Acumatica and SellerCloud Connector.

If you want to sync the quantity, you must select one of the options from the drop-down below.

- **Qty On Hand:** It refers to the quantity of a particular item that is physically available or in stock within your inventory. It represents the actual count of units you currently have on hand for a specific inventory item.
- **Qty Available:** It refers to the quantity of a specific item that is currently available for sale or use. It considers not just the physical quantity on hand but also considers factors like committed quantities, backorders, and other reservations.
- **Qty Available for shipping:** It refers to the quantity of a specific item that is currently available and ready to be shipped to fulfill customer orders.
