

# Substitute List

 Substitute list helps to communicate between the two systems.

We created a new configuration screen to map the Acumatica and SellerCloud Connector Countries along with states. So Based on the entries the Data sync to SellerCloud Connector as well as Acumatica. In Customer Data Retrieval, Acumatica sends the mapped SellerCloud Connector country and state value through the API. From SellerCloud Connector to Acumatica, Acumatica converts the SellerCloud Connector value into the mapped Acumatica value and saves the record in Acumatica.

You can use this Substitute List to Establish the connection between Acumatica (Full name Ex: New York) and SellerCloud Connector (Abbreviations: NY).

- To access Substitute Lists you need to click **[Substitute Lists]** under configuration.

## Substitute Lists

- Upon clicking on **[Substitute List]** a new page will appear.
- Select the **[Substitute Type]** from the drop-down menu:
  - Country
  - State

- Click on the **[+]** icon.
- You need to enter the **[Acumatica Country/state]** and **[Connector Country/State]**.

## Illustration

If you are using [New York] in Acumatica and [Ny] in SellerCloud Connector, based on this mapping, the connection for countries and states will be established.

The screenshot displays the 'Substitute Lists' interface. At the top, there's a search bar and navigation icons. The left sidebar contains various application modules like Banking, Payables, Receivables, Sales Orders, Purchases, Inventory, Dashboards, Commerce Connector, and Sellercloud Connector. The main area shows a table with the following structure:

Substitute Type	Acumatica Country	Connector Country
Country		
Country		
State		

A red box highlights the '+' icon in the table header, indicating where to click to add a new substitute. Another red box highlights the dropdown menu for 'Substitute Type', which is currently set to 'Country'.
