8.23.0	Release Notes	Documentation Team	Kishore C		19-11-2024

# **New Features and Enhancements**

# Optimized the space for the Location list in Fusion Warehouse Preferences screen

The number of locations displayed per page on the Fusion Warehouse Preferences screen was previously too limited, despite there being ample space available. This space has now been optimized to accommodate more locations.

Figure: Upon checking the Resolve Check box, the unresolved error will disappear.

Now if you select Resolved from the drop-down the error will be shown.

#### Alternate ID Description field from Allocations screen is ReadOnly.

The Allocation field "Alternate ID Description" in Shipment screen has now changed to [Read Only] mode from editable.

When you create a Sales Order and click on create shipment the application will take you through to the Shipment screen. In the [Line Details] tab of Shipment Screen a pop up is generated. Within the pop up [Alternate ID Description] column is available which displays the alternate id of the stock item which you have selected in the Sales Order screen.

### SelfPack logic added to Quick Pack

When an item is to be packed individually i.e. is its own package on an Acumatica Shipment, Scanning or entering this BoxID on the handheld will create a unique package for this item / UOM. The dimensions and weight as established in the Acumatica Cross Reference table has been added.

### **Fusion-Customized Shipment Summary screen removed**

In Fusion WMS in Acumatica a new option is added as [Fusion Shipment] under the Transaction option. Shipment Summary screen is customized by Fusion as FR302001. So, when you perform the own customizations to the Acumatica Shipment Summary screen, these are gone along with the original screen. Now Fusion will be a separate screen in Fusion WMS Section.

Upon clicking on the option, the application will take you through to the following screen which starts with FR as a dedicated Fusion Shipment Screen in Acumatica.

Figure: Shipment Screen in Acumatica starts with SO

This feature will help you to segregate the WMS Shipment screen even though the records will be available in both screens.

### Advanced Allocations introduced Pallets from Pallet Stock Checkbox

The Optimization Suite now has the ability to allocate Pallets from Pallet Stock (Advanced Allocations). These Pallets must not mix different items and must not be already assigned to a Shipment. Also, for Master Pack Container Types, the Pallet must have set a Box to be candidate for Advanced Allocation.

Navigate to Fusion Sales Order Preferences under Preferences in Fusion WMS.

#### Master Pack Generic Box checkbox added to Fusion Boxes screen

We have added a new checkbox field "Master Pack Generic Box" to the Fusion Boxes screen to indicate, whenever possible, that the Package, to which this Box ID is assigned, is a Master Pack type. If the Field is not checked, then the package must be an Inner Pack by Default.

Navigate to [Fusion Boxes] under Fusion WMS as shown below.

<u>Scenario II:</u>

Inner Pack: Yes

#### Self-Pack: Yes

Master Pack Generic Box: No.

With the above condition create a Sales Order only just enable Inner Pack as true / Yes and Master Pack Yes, only Inner Pack will be created.

Scenario III:

Inner Pack: Yes

Self-Pack: Yes

Master Pack Generic Box: Yes.

With the above condition create a Sales Order only if all the conditions are [Yes], then Master Pack will be created.

#### New GI to show Empty Locations

A GI has been introduced to show the empty locations. Navigate to Fusion WMS and under Inquiries a new GI [Empty Location] has been added.

#### Figure: Empty Location added

Upon clicking the application will show the empty location based on the Warehouse selection.

Figure: Empty Location in the Warehouse Screen

This feature will facilitate to identify the empty locations. Against a specific warehouse you can easily track empty locations if any. Once you assign any quantity against the location it will not be displayed on the empty location screen.

### **Installation Changes**

There are no installation changes included in this release.

# **UI Changes**

There are no UI changes included in this release.

Workspace	Screen	Entity

# **Known Bugs and Issues**

- The inventory summary of an item was incorrect (the quantity in the SO Allocation was not correct) after processing the shipment where it was included, an 'Unassigned' location is generated in negative numbers in SO Booked, which did not exist before.
- We have fixed the Fix Inventory Summary when using both serial / lot tracking and Containers.
- The default Acumatica feature 'Print labels' from the label section is missing on the shipment screen when publishing the WMS Advanced Package.
- The commit process encountered errors when attempting to process shipments of 40 containers or more. Additionally, some transfers remain unbalanced and lack a corresponding reference number.
- Multipack module was not allowing the user to load the Shipment again after Saving, so the user cannot Commit the Shipment.
- After scanning different UOMs from Base in Quick Pack module, the quantities in the Packages were incorrect.
- Kensium WMS 8.23.00 officially supported build of Acumatica 24R1, was upgraded to Build 24.113.0010.
- When the handheld device (HH) is first installed and the user accesses the Pack module and loads a shipment, the HH prompts for the location instead of the box ID, which results in an error in the application.
- When the users Save a Shipment after performing a Pack (Sometimes Pick) the App sets the Shipment
  Pick Status from "Picking "to the right status (Partial Pack/Packed/etc) and then reloads the shipment to
  keep packing or to commit, then the App updates the Shipment Pick Status again to set it as "Picking ".
  These were unnecessary additional API calls that can be avoided by analyzing the shipment, if it is going
  to be reloaded then there is no need of updating it from Picking->Packed->Picking.
