## New Features and Enhancements

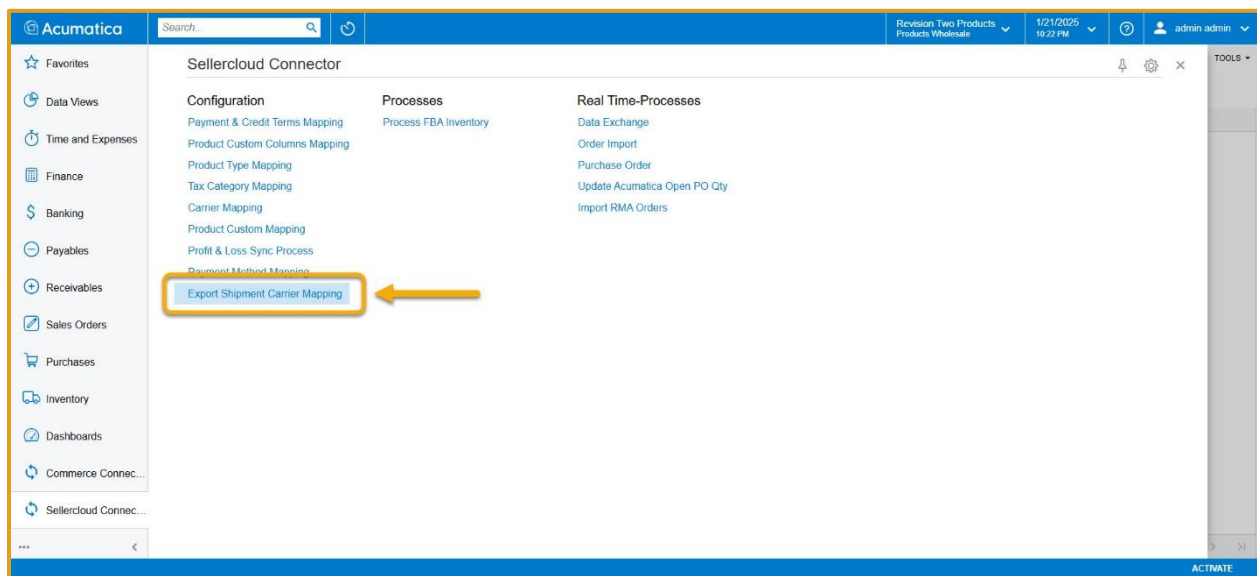

# ShipVia logic added to log screen

The Carrier Mapping from SellerCloud to Acumatica now support when carrier is selected as "Other". ShipVia code previously only allowed carrier names to track shipping details of a Sales Order. This is now enhanced to enable you to track every Sales Order.

- ✓ After an order is placed in through SellerCloud with carrier name as "Other" this will be automatically synced to Acumatica based on your settings.

- ✓ In Acumatica navigate to **[Export Shipment Carrier Mapping]** from Sellercloud Connector as shown below, and create carrier mapping from SellerCloud Connector to Acumatica

- ✓ Once the Export Shipment Carrier Mapping is done, the orders with Carrier as Other can be imported from Sellercloud.

# Installation Changes

There are no installation changes included in this release.

# UI Changes

There are no UI changes included in this release.

# Known Bugs and Issues

- ✓ The Order Process table keeps accumulating records of outdated data. The records are not deleted even after the order status is "Completed". (SCC-17)
- ✓ The Site Association table displayed data for all connector IDs instead of data with only matching connector IDs. (SCC-17)

All identified bugs and issues have been analyzed and rectified.

# Appendix

ID	Description
SCC-14	For Shipvia with Others: Special logic needs to be added to consider shipvia as Others
SCC-17	Improve the Order Import table and site association cleanup
